## **Abstract**

Performing aggregation and visualization on large datasets has become a major part in Information Technology. Such datasets are often exported by a third party software or service provider, and arrive in a transmittable format like JSON or CSV. This term paper compares the grouping operation on large CSV files between PowerShell's Group-Object command and MySQL's GROUP BY and SORT BY statements in regards of their interface, underlying algorithm and RAM usage. On two identical machines limited in RAM, we simulate how PowerShell's and MySQL's grouping operations perform. As a result, we formulate best practices for aggregating large CSV files.

**Keywords:** Database, Aggregation, Grouping, CSV

# **1 Introduction**

## **1.1 Problem**

## **1.2 Objectives**

## **1.3 Structure**

# **2 Theoretical Foundation**

## **2.1 Database**

## **2.2 Grouping, Aggregation, Splitting**

# **3 Simulation**

## **3.1 Methods**

## **3.2 Implementation**

## **3.3 Results**

# **4 Conclusion**

## **4.1 Comparison**

## **4.2 Future Work**

## **5 General Addenda**

If there are several additions you want to add, but they do not fit into the thesis itself, they belong here.

### **5.1 Detailed Addition**

Even sections are possible, but usually only used for several elements in, e.g. tables, images, etc.

## **6 Figures**

### **6.1 Example 1**

### **6.2 Example 2**

## **List of Figures**

## **List of Tables**
